HERG channel blocker predictor

- Fingerprints- radius- 2, fpize- 2048
- **X**- table of fingerprints
- **y**-pChEMBL values.
- Split- train / test (80/20)- scaffold
- PCA-

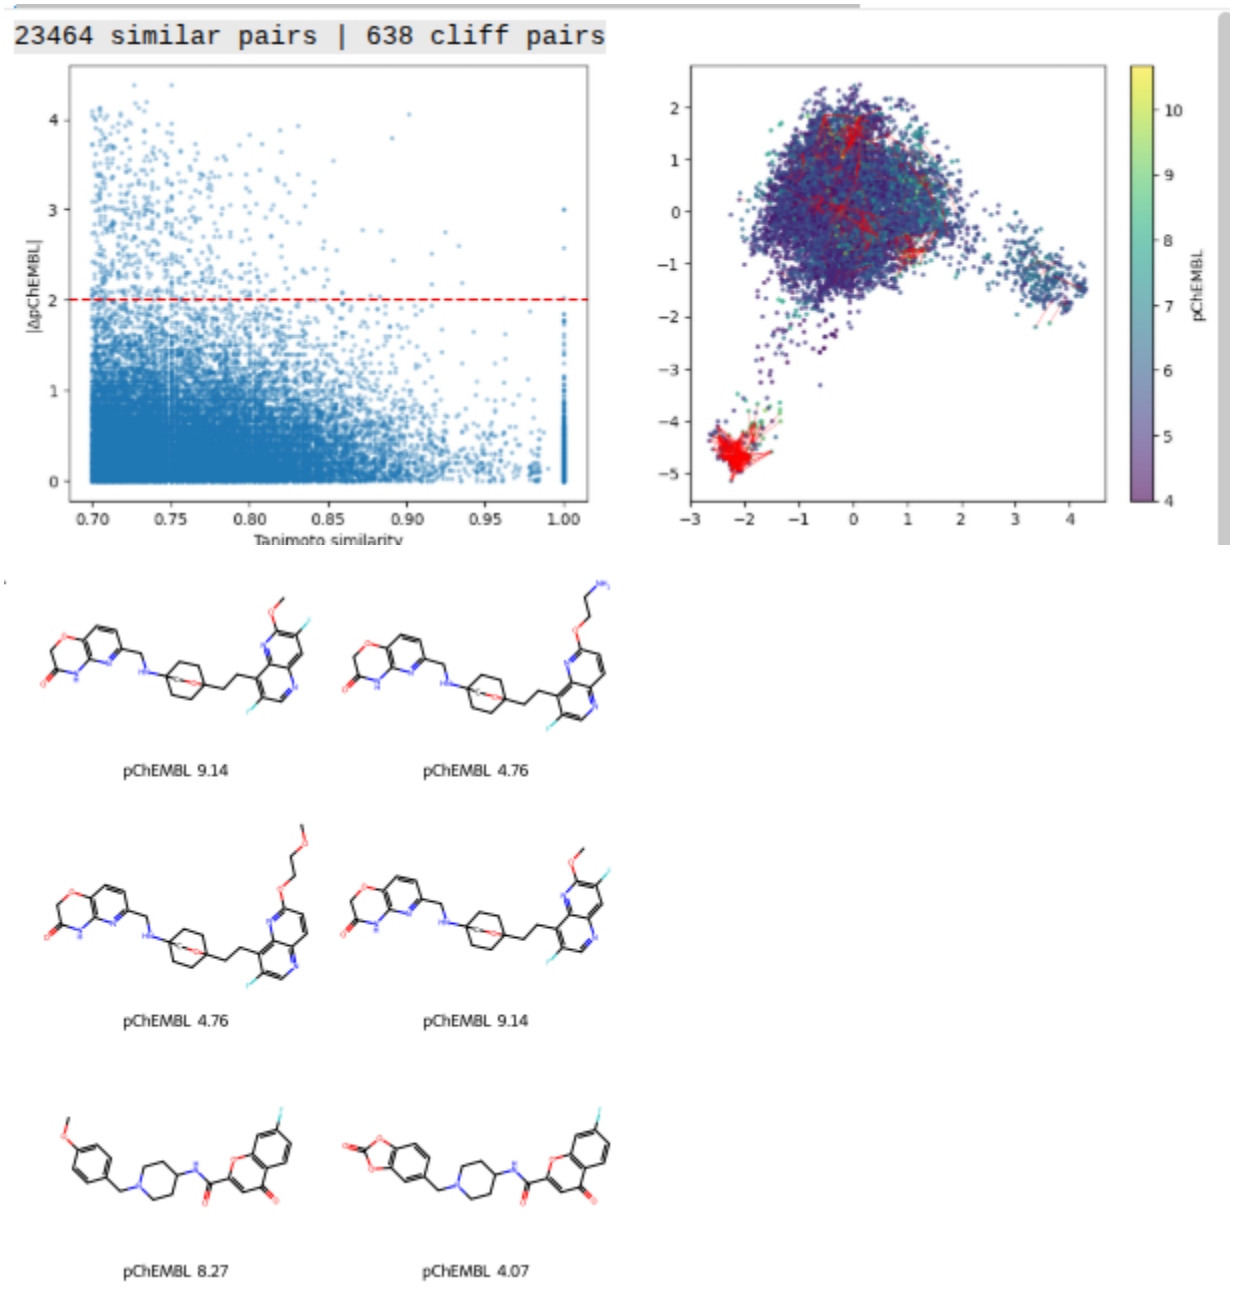

```
variance explained: 0.046
```

- Models used- ridge, svr,knn, random forests, baseline
- Results-

	model	R2	RMSE	MAE	Spearman
3	SVR (RBF)	0.464	0.633	0.474	0.604
4	Random Forest	0.438	0.648	0.488	0.581
2	kNN (k=5, Jaccard)	0.330	0.707	0.523	0.520
1	Ridge	0.257	0.745	0.572	0.483
0	Baseline (mean)	-0.001	0.865	0.658	NaN

- Activity cliffs-

- Findings- error on cliff molecules is about 1.1 to 1.2, against about 0.47 for everything else and 57% of cliff pairs come from different papers, against 8% of all similar pairs- interlaboratory noise
